

Adithya Venkatesh

Experience

Amazon.com | SEATTLE, WA | 10/01/2025 - Current

Principal Software Engineer | Builders Foundations

- In December 2025, I moved to work on systems at the heart of the 'store' (Amazon.com) to evolve their testing practices to be AI-native - i.e. bring local testing to the masses by plugging a local SUT into the service mesh, so coding harnesses can have verifiable end states for features.
- Reduced the impact of flaky integration tests at Amazon - This was a massive attempt to improve reporting and resolution for a class of tests that people are afraid to touch. I did a quantitative analysis of 2TB of test data, to justify building reporting (for leaders, and practitioners) to get real time test reporting from our CI systems - and developed LLM-backed solutions for resolving them.

Amazon Web Services | SEATTLE, WA & SYDNEY, NSW | 07/01/2019 - 09/30/2025

Senior SDE | Builders Tools

- I conceived and implemented a project to massively tighten Amazon's dev-test cycle, allowing Amazon's builders to completely test changes before merging into mainline. This involved driving consensus across a 500-person organization; convincing directors, principal engineers, and a VP that this was the best use of our time.
- Bootstrapped a new organization in Australia, growing from 5-20+ engineers who consistently deliver delightful integration and load testing tools to Amazon engineers.
- Led a team of 40+ engineers spread across two timezones with the charter of helping Amazon builders ensure they were always producing high-quality software.
- Identified architectural redundancies in two Continuous Integration (CI) systems which drive 99% of Amazon's Continuous Integration (CI) traffic. I authored and delivered a 2-year plan to combine these systems, and consulted with 2x '2-pizza' teams to successfully merge them.
- Worked with senior engineers on the team to prototype a tool to dynamically understand traffic patterns and help Amazon's service owners comprehend the difference between customer behavior and test coverage.
- Member of the organization's 5-person incident response escalation team - I orchestrate resolution of high impact security and operational issues in my organization when frontline engineers need help

Amazon Web Services | SEATTLE, WA | 07/13/15 - 06/31/19

SDE | Developer Tools

- Designed from scratch and lead a team of 7 engineers to build tools for continuous/canary testing to help service owners identify issues and pre-empt negative customer impact.
- Owned and launched a fully-managed cross-vertical (integration, load, canary) test orchestration platform used by 50% of Amazon's teams.
- Constantly finding ways to evangelize Builder Tools products and educate new engineers; led workshops, bootcamps and talks.
- AWS CodeBuild pre launch team - One of three engineers selected from my VP's org to spur the launch effort of AWS CodeBuild in time for re:Invent!

Academic Projects | 2013 - 2015

- **Graduate | Cornell University** - Built/Prototyped a scalable cryptocurrency exchange built on top of Bitcoin, and Hyperdex (under Emin Gun Sirer)
- **Undergraduate | Inmobi** - Prototyped a Jenkins + Chef + test-kitchen based Integration Test framework for a chef-based deployment platform with JenkinsCI 2) A platform that enabled analysis of source quality and build metrics at Inmobi
- **Summer Research | Concordia University** - 'CDMA Protocol in Multi-channel Multi-Radio Wireless Mesh Networks' with Prof Brigitte Jaumard.
- **Summer Research | IIT Bombay** - Algorithmic solutions and improvements to simulate CNC Machining using Octree and Quadtree data structures.

Education

05/24/15 Cornell University, USA
MEng, COMPUTER SCIENCE

06/06/14 M. S. Ramaiah Institute of
Technology, INDIA
B.E. COMPUTER SCIENCE
